RE: Pre & Post-Construction Structural Surveys

Dear Sir or Madam:

The Prime Contractor Great Lakes Dredge & Dock Co. (GLDD) is in contract with the City of Deerfield Beach/Town of Hillsboro Beach to provide beach renourishment in areas along the beach front adjacent to your property. The purpose of this project is to counteract the natural erosion process as well as provide a suitable beachfront for property owners and any other tourists and/or visitors.

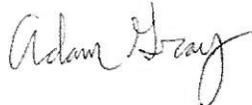

Heavy equipment will be operating on the beach near the homes and structures adjacent to the work area. Although vibrations may be felt, these levels are well below the threshold that would even cause minor cosmetic damage. Equipment will be advancing down the beach at a rate which will minimize impact and duration for your particular area.

GLDD has hired Gray Seismic Monitoring, LLC (GSM) to conduct Pre- and Post-Construction Structural Surveys as well as perform a Vibration Monitoring Program in order to maintain compliance with the project specifications.

Please allow GSM access to the exterior of your property to conduct these inspections at no cost to the owner, as well as answer any questions you may have regarding the Vibration Monitoring process.

Please feel free to contact Adam Gray at 904-728-3299 or adam@grayseismicmonitoring.com if you need any additional information or have any other questions.

Best regards,

Adam Gray
Senior Seismic Consultant
